Statement of the problem

①

Statement of the Problem

Problem Statement

"The current system is not computerized and has a lot of drawbacks that could be minimized a lot with implementation of web based system "

Objective

①

Objective of the Project

General Objective

The general objective of this project is to build a web-based application that helps in agricultural market management system that helps farmers reach the customers.

Objective of the Project

Specific Objective

Studying about problem of the existing market

Gathering required information for proposed system

Analyzing the gathered information.

Description of the existing system

①

Existing System

Intro to existing system

Currently the agricultural product management system is not organized and entirely depends on old non-automated system.

The process of buying and selling of agricultural is led by the market

the process of the trade depends on verbal communication between the participating organs.

continued ...

Actors of existing system

Farmers

Merchants

Consumer

Ministry of trade

continued ...

Activities in the Existing System

Maintaining the price information

Regulating the selling and buying of products

Supervise the overall trade activity

Controlling the quality

continued ...

Drawbacks of existing system

Performance (Response Time)

Security and Controls

Efficiency

Functional *vs* Non-Functional

①

Functional Requirements

Login

Feedback and review

Manage account

upload photos

post products

Generate report

update profiles

Non-Functional Requirements

Users interface requirement

Well documented

Authentication Requirement

Resources

Robustness

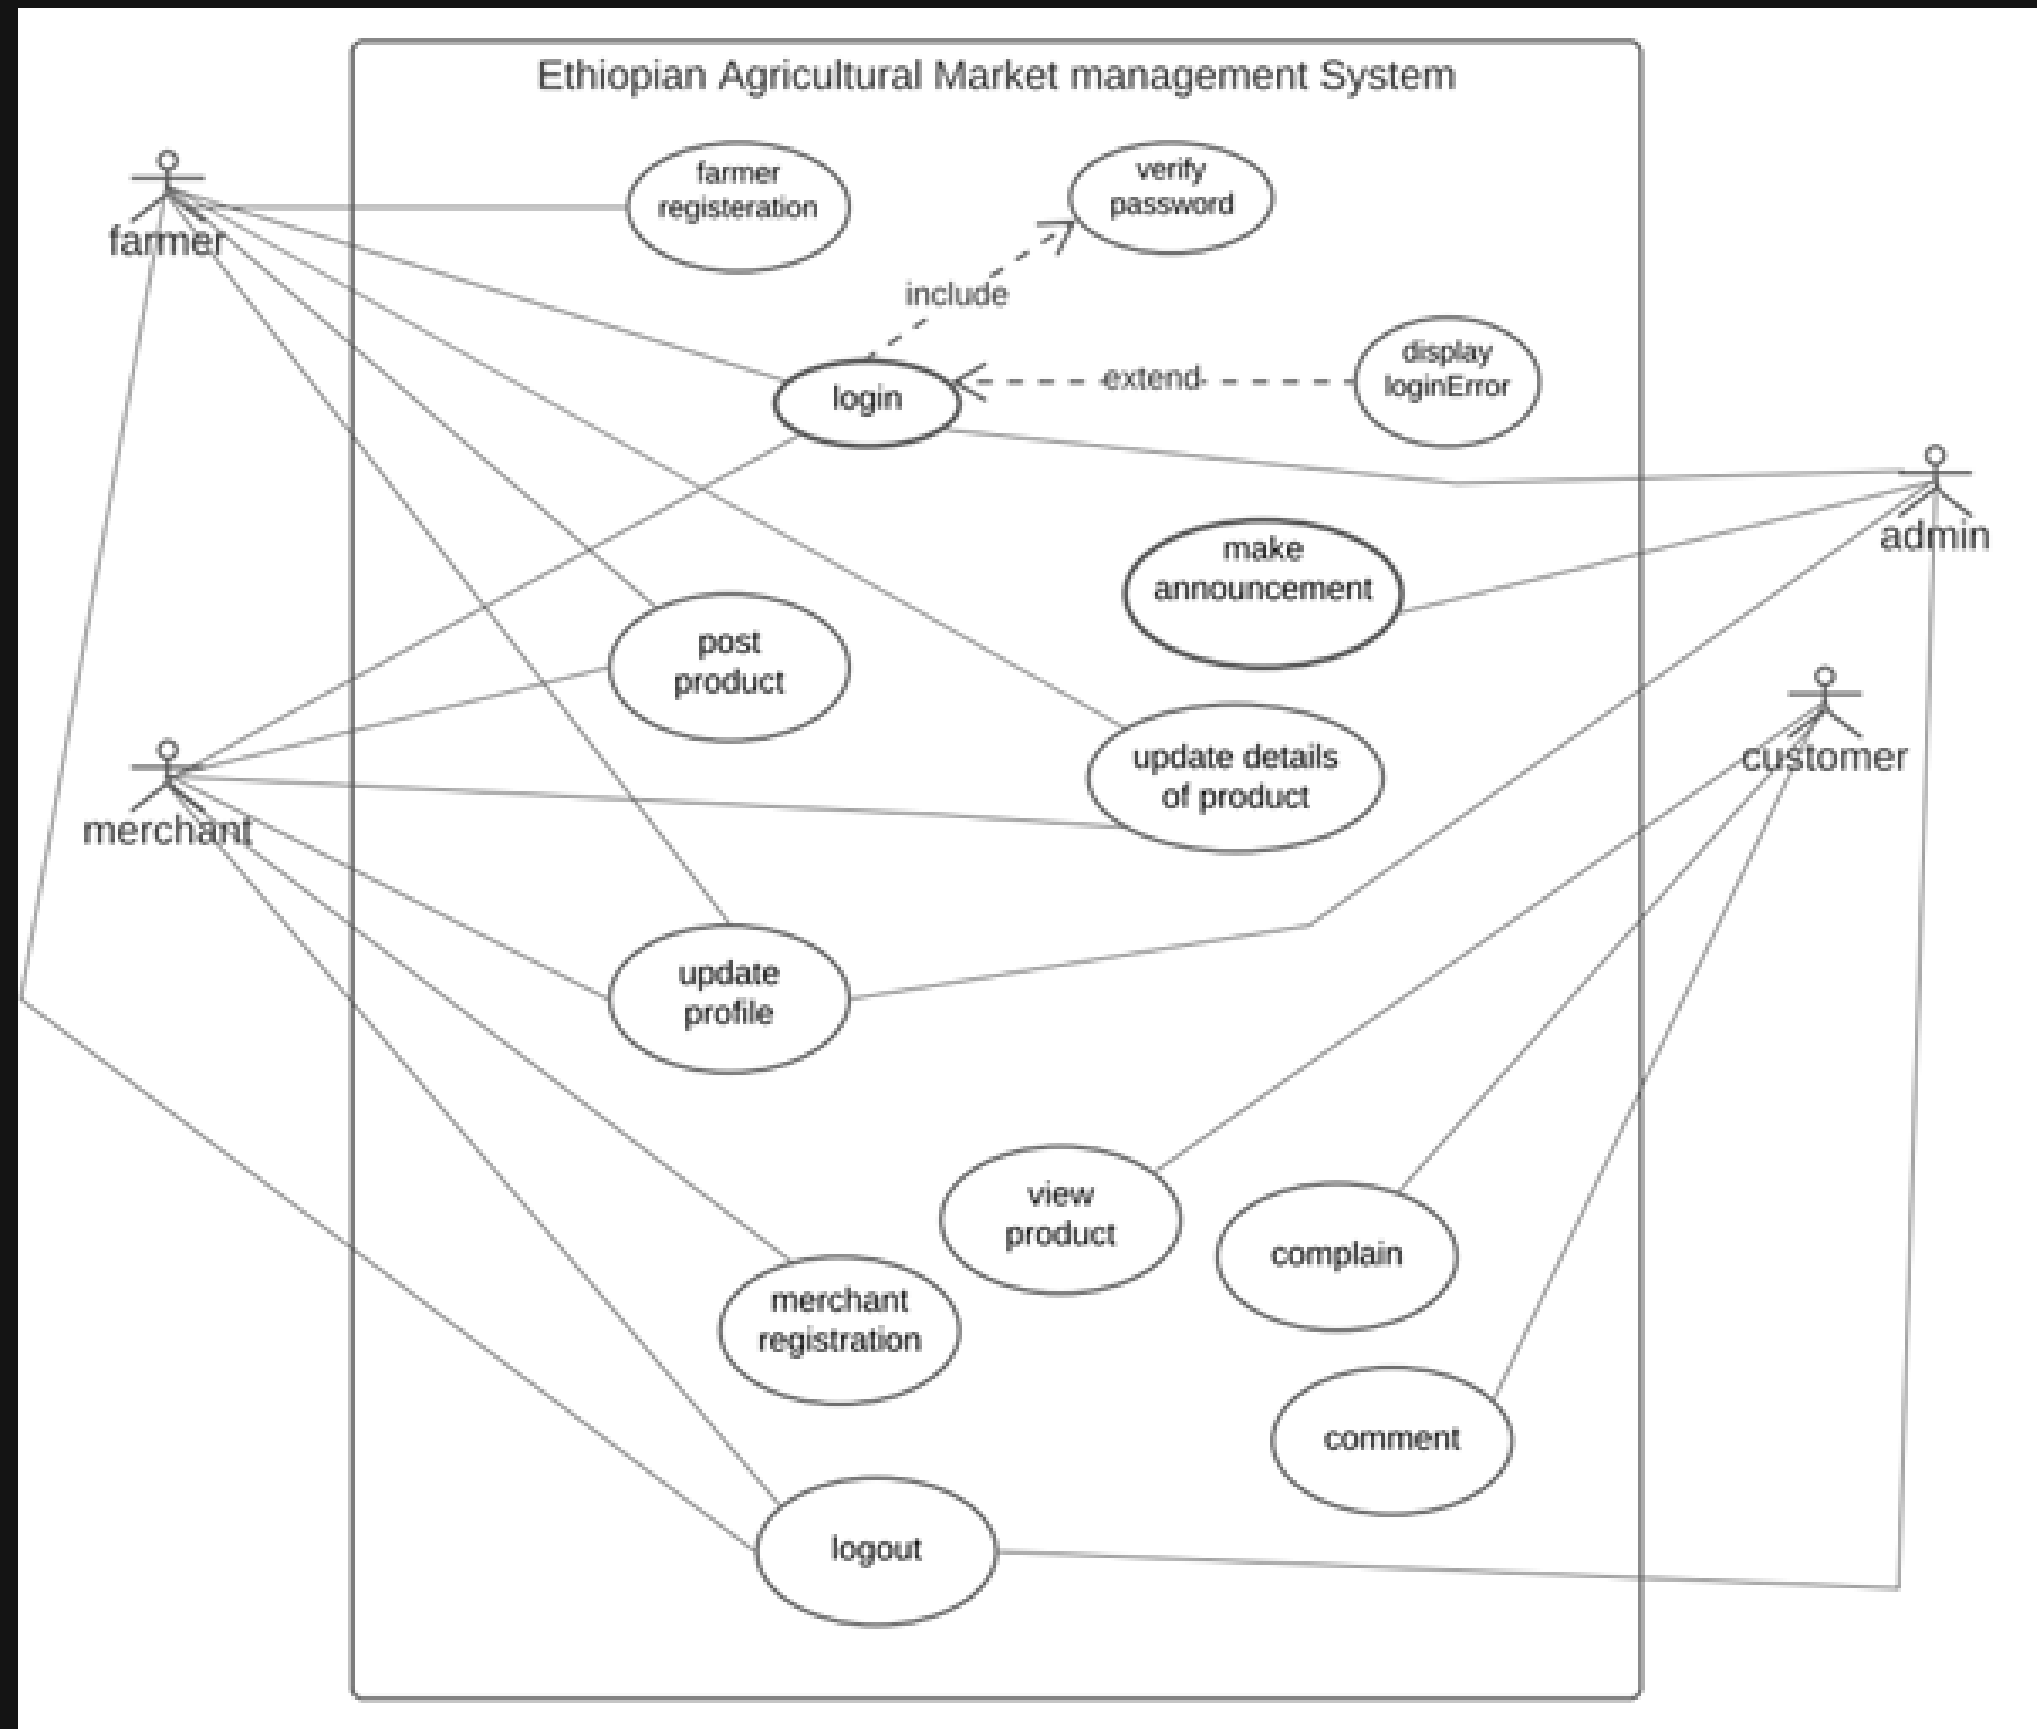

Accessibility
